

Montana: Top Power Plant Carbon Polluters

For over forty years, the Environmental Protection Agency (EPA) has used the Clean Air Act to hold polluters accountable and successfully protect the health of millions of Americans – including our children, seniors, and the most vulnerable among us – from dozens of different air pollutants. Cleaning up our air has also protected wildlife from harmful pollution that threatens species directly and con-

taminates water, degrades habitats, and damages the environment.

The National Wildlife Federation, on behalf of our over four million members and supporters nationwide, stands with a broad coalition of public health, environmental, business, labor, faith, and sportsmen organizations in support of the Clean Air Act and in strong opposition to any attempts to weaken its protections. It is critical that the EPA continue its important work of reducing air pollution in this country by setting strong limits on all pollutants, including carbon pollution, as required by the Clean Air Act. It is time for our nation's polluters to finally be held accountable for their harmful air pollution that contributes to climate change.

Power Plant/Owner	Location	Carbon Emissions ¹ (MT CO ₂ e)	Mercury (Hg) Emitted ² (lbs)
Colstrip/Puget Sound Energy	Colstrip, MT	16,994,687	1,490
J E Corette/PPL MT	Billings, MT	1,050,200	85
Hardin Generating Station/Bicent Power	Hardin, MT	908,390	70
Yellowstone Energy Limited Partnership/Billings Generation Inc.	Billings, MT	707,787	No Data
Colstrip Energy Limited Partnership/Puget Sound Energy	Colstrip, MT	415,871	20
Lewis and Clark/MT-Dakota Utilities	Richland, MT	385,861	61
Mill Creek Generating Station/NW Energy	Anaconda, MT	31,688	No Data
Culbertson Station/Basin Electric	Culbertson, MT	7,045	No Data
Glendive Generating Station/MT-Dakota Utilities	Glendive, MT	6,149	No Data
1 million Metric Tons (MT) of CO₂e emissions is the equivalent of burning about 112 million gallons of gasoline.³

Recently, the Environmental Protection Agency finalized **new air pollution standards** that will reduce dangerous mercury pollution for power plants by 91%. But the job of controlling other air pollution from these sources is far from done. Unchecked carbon pollution that causes climate change is fundamentally altering our environment and putting fish and wildlife populations and our outdoor heritage at risk.

Now the EPA is in the process of taking common-sense steps to crack down on big power plant polluters. New clean air standards limiting carbon pollution from power plants and other industrial smokestacks are essential to safeguard wildlife, improve public health, and protect our kids from dangerous air pollution by improving air quality.

Help NWF protect wildlife and our health from the impacts of dangerous air pollution and climate change visit: www.nwf.org/cleanair
