

New Hampshire: Top Power Plant Carbon Polluters

For over forty years, the Environmental Protection Agency (EPA) has used the Clean Air Act to hold polluters accountable and successfully protect the health of millions of Americans – including our children, seniors, and the most vulnerable among us – from dozens of different air pollutants. Cleaning up our air has also protected wildlife from harmful pollution that threatens species directly and con-

taminates water, degrades habitats, and damages the environment.

The National Wildlife Federation, on behalf of our over four million members and supporters nationwide, stands with a broad coalition of public health, environmental, business, labor, faith, and sportsmen organizations in support of the Clean Air Act and in strong opposition to any attempts to weaken its protections. It is critical that the EPA continue its important work of reducing air pollution in this country by setting strong limits on all pollutants, including carbon pollution, as required by the Clean Air Act. It is time for our nation's polluters to finally be held accountable for their harmful air pollution that contributes to climate change.

Power Plant/Owner	Location	Carbon Emissions ¹ (MT CO ₂ e)	Mercury (Hg) Emitted ² (lbs)
Merrimack/PSCNH	Bow, NH	2,554,414	214
Granite Ridge Energy/NAES	Londonberry, NH	1,311,476	No Data
NAEA Newington Energy LLC/PSCNH	Newington, NH	764,924	No Data
Schiller/PSCNH	Portsmouth, NH	538,728	137
Newington/PSCNH	Newington, NH	203,963	1
1 million Metric Tons (MT) of CO₂e emissions is the equivalent of burning about 112 million gallons of gasoline.³

³ Gallons of gasoline equivalency provided by EPA's Greenhouse Gas Calculator. <http://www.epa.gov/cleanenergy/energy-resources/calculator.html>

Recently, the Environmental Protection Agency finalized **new air pollution standards** that will reduce dangerous mercury pollution for power plants by 91%. But the job of controlling other air pollution from these sources is far from done. Unchecked carbon pollution that causes climate change is fundamentally altering our environment and putting fish and wildlife populations and our outdoor heritage at risk.

Now the EPA is in the process of taking common-sense steps to crack down on big power plant polluters. New clean air standards limiting carbon pollution from power plants and other industrial smokestacks are essential to safeguard wildlife, improve public health, and protect our kids from dangerous air pollution by improving air quality.
