

STUDY A SNAG

Snags are dead trees that are still standing. They are important places for wildlife. Can you spot a snag? Then can you find signs of animals giving it new life?

Keep a record!

Date _____ Time _____

Location _____

Weather _____

Helpful Things to Take Along:

☐ Magnifying glass

☐ Binoculars

Sketch your snag in the box below. Then look for signs of wildlife.

- From far away, binoculars may help you see birds perched atop the snag or peeking out of holes.
- Close up, use a magnifying glass to search for insects under the bark.

Describe what you find:
