

November 15, 2010

Dear Senator:

As allies and representatives of low-income communities and communities of color, we are writing to urge you to oppose any legislation that would block President Obama and the Environmental Protection Agency (EPA) from enforcing the Clean Air Act to fight global warming.

The Clean Air Act is a proven law with a nearly 40-year track record of protecting communities from dangerous pollution. The law's accomplishments include reducing children's exposure to toxic lead by phasing lead out of gasoline, achieving substantial reductions in dangerous smog and soot pollution in communities, and preserving waterways and our environment from damaging acid rain. In December 2009, EPA found that global warming pollutants endanger public health and welfare, and are covered under the Clean Air Act. Any attempt to delay acting to reduce the emission of these pollutants that cause and contribute to climate change and worsens the air quality problems in our communities is unacceptable.

Big polluters, like coal-fired power plants and oil refineries, dominate our energy sector and for decades have posed serious threats to public health and the environment, which are magnified for the nation's most vulnerable communities. Big polluters are disproportionately located in low-income communities and communities of color, and their localized air pollution places an immense burden on the health and well-being of the surrounding communities.

For example, a 2002 study by a coalition of environmental justice organizations found that 68 percent of African Americans live within 30 miles of a coal-fired power plant – the distance within which people experience the maximum effects of smokestack emissions – compared with 56 percent of U.S. whites.¹ EPA found that climate change will intensify the impacts of that pollution. Requiring these power plants to reduce global warming pollution under the Clean Air Act is a key tool for protecting the health and well-being of the surrounding, often vulnerable communities.

Action against global warming is long overdue. Every year that we wait to address global warming, the impacts of global warming – record high temperatures, more severe droughts, stronger storms, heavier rainfall and flooding, and sea-level rise – continue to hit underserved communities first and worst. More frequent and intense heat waves increase the threats of asthma and other respiratory disease; more frequent and intense rainfall and flooding, and sea-level rise increase the threats of water-borne diseases. Low-income and minority communities often have less access to health care and less ability to incur the costs of global warming related disasters.

Any legislation that places a stop-work order on or blocks the Clean Air Act will severely jeopardize our ability to protect public health in our communities, fight global warming, and transition America to a clean energy economy. To protect public health and welfare, especially in our nation's most vulnerable communities, it is essential that President Obama and EPA use the Clean Air Act as a tool to reduce global warming pollution.

We urge you to oppose any legislation that restricts the Clean Air Act from addressing global warming.

Sincerely,

1Sky
