Won’t Upper Peninsula residents freeze without propane from Line 5?

The small amount of product delivered from Line 5 can readily be delivered to residents in other ways. There’s no reason to risk the Great Lakes.

The U.P. doesn’t need Line 5. There are reasonable alternatives.

Alternatives to Line 5 propane.

OPTION #1 Expand and dekotenech propane processing at the beginning of Line 5 in Superior, Wisconsin. The processed propane can then be delivered via tanker truck or rail car.

OPTION #2 An active rail line just two miles from the Rapid River propane processing plant. Connecting the rail line to the plant would provide a reliable propane delivery system.

OPTION #3 Increasing the storage capacity at the Kitchikoke processing plant would allow the plant to meet all of the Upper Peninsula’s propane needs.

We can live without Line 5, but not without the Great Lakes.
