

February 3, 2010

The Honorable Regina Benjamin
Office of the Surgeon General
5600 Fishers Lane, Room 18-66
Rockville, MD 20857

Re: Petition for a Surgeon General “Call to Action” on the Health Benefits of Daily Outdoor Play for Children and Families

Dear Surgeon General Regina Benjamin:

Congratulations on your recent confirmation as Surgeon General of the United States and on the release of your *Vision for a Healthy and Fit Nation*. On behalf of the 215 undersigned national and state organizations and more than 16,500 individuals who signed the attached petition, we are writing to ask for your help in addressing a critical aspect of children’s health and well-being. **We ask that you, as the Surgeon General, recommend that all American children and their families take time every day for unstructured outdoor play and interaction with the natural world.**

Over the last 20 years, American childhood has increasingly moved indoors, and the amount of time children spend playing outdoors has declined by 50 percent. Today’s children spend approximately 55 hours per week plugged into some type of electronic media. The rest of their time has become so overscheduled that many children have little downtime. Meanwhile, rates of childhood overweight and obesity have tripled. As a result, approximately one in three children and adolescents are at an unhealthy weight which is increasing their risk for certain chronic diseases as children and later in life. Low income children, who are at greatest risk for chronic diseases, have the least access to safe natural spaces.

There is compelling research in the fields of public health, psychology, planning, medicine, and others documenting the physical, mental, and social health benefits that children reap when they are encouraged to interact with nature in an outdoor setting. Among these health benefits are lower stress levels, healthy weights, stronger immune systems, reduced incidence of anxiety-related disorders, better cognitive development, and respect for themselves, others, and the environment. The benefits of play are so compelling that the American Academy of Pediatrics considers, “...free play as a healthy essential part of childhood...” and recommends ample time for daily, unstructured play for children’s health.

Complementing the AAP recommendations to promote and improve children’s health are the first-ever national guidelines for physical activity issued on October 7, 2008. The 2008 Physical Activity Guidelines for Americans recommends that children and adolescents 6 to 17 years old should accumulate one hour or more of physical activity daily that is mostly aerobic and leads to stronger bones and muscles. Unfortunately, the health benefits of outdoor play are bypassing many of today’s children and their parents.

The scale and depth of this children's health issue has given rise to the phrase "nature deficit disorder," coined by author Richard Louv.

We strongly believe, however, that there is a way forward on this children's health issue. As with other Surgeon General activities promoting children's health, including the current "*Healthy Youth for a Healthy Future*" initiative, you can also help address the problem of nature deficit. We ask that you officially recommend that all American children and their families take time every day for unstructured outdoor play and interaction with the natural world. This behavior—a green hour—can be easily accomplished in backyards, gardens, school grounds, parks, woods, or other outdoor green spaces found in neighborhoods and the larger community. Depending on a child's age, interests, and parental involvement, a green hour could occur as time alone, as with past generations of children. Or a child could enjoy their green hour with parents, grandparents, other family members, and friends.

Developing a recommendation based on the health benefits of unstructured outdoor play and interaction with the natural world would complement two related Surgeon General recommendations. Together, all three recommendations comprise a bedrock foundation necessary for a life free of chronic disease and disability. Imagine a day where all young people are meeting the Office of the Surgeon General's recommendations for 1) physical activity (as outlined in the *2008 Physical Activity Guidelines for Americans*), 2) nutrition (eating in accordance with the *2005 Dietary Guidelines for Americans and My Food Pyramid*), and 3) getting their daily dose of unstructured outdoor play and interaction with the natural world. Again, these three behaviors constitute a powerful prevention-based approach for protecting and promoting the health of all Americans.

As America's chief health educator, we are requesting that you take the following specific actions:

- 1) Issue a Surgeon General "Call to Action" promoting the physical, mental, and social health benefits available to children and their families when children engage in active time outdoors and unstructured play in outdoor, natural settings.
- 2) Strengthen the *Healthy Youth for a Healthy Future* initiative by adding a green hour to your "Surgeon General's Pledge to Help Prevent Childhood Overweight and Obesity" and associated checklists for parents, caregivers, and communities.
- 3) Convene a National Summit among public health officials, the medical community including pediatricians and mental health professionals, and other experts on unstructured play in outdoor, natural settings as a means of promoting and protecting children's physical, mental, and social health. Additional research needs and barriers preventing unstructured outdoor play in natural settings in all communities should be considered and integrated into summit findings.

In closing, we stand ready to work with you and your staff on reversing the threat that nature deficit poses to the health of America's children and their families. Please have

your staff contact Kevin Coyle, Vice President of Education with the National Wildlife Federation, so that we may begin working with you. Kevin can be reached at coylek@nwf.org or 703-438-6416. Thank you.
